PROFILE

A nimble technologist who specializes in web application and systems development from product formation through deployment. Experienced in the implementation and maintenance of software in an agile environment.

EXPERIENCE

Lead Cloud Developer

Aug 2016 - Present

Senior Developer

Feb 2012 - Aug 2016

DreamHost

Atlanta, GA

Served as a lead developer on DreamHost's public cloud service, DreamCompute. In this role, I led development on a wide variety of systems and services ranging from a utility billing system to a web-based interface used by customers to manage virtual servers, networks, and storage. I also played a pivotal role in the creation of the OpenStack Astara project, an open source network orchestration service designed for provisioning virtual network functions in OpenStack deployments. During the Newton (Spring-Fall 2016) release of OpenStack, I served as the Project Technical Lead for the OpenStack Astara project.

Led the development of a re-imagined signup process for DreamHost's entire product line, and played an active role in its deployment. Helped spearhead the introduction of RESTful APIs into legacy systems, and encouraged the use of best practices through testing and continuous integration.

Director of Web Engineering

Nov 2010 - Feb 2012

Lead Software Developer

Dec 2007 - Nov 2010

Pictage, Inc and ShootQ, LLC

Atlanta, GA

From 2007 to 2010, played a central role in the design and implementation of **ShootQ**, a software-as-a-service used by photographers to manage and run their businesses. My responsibilities included the design and implementation, the management of production architecture, and defect resolution for current and legacy versions of ShootQ.

In 2010, the ShootQ product and team were acquired by Pictage, Inc. From 2010, led software engineers in the development of web software and services for professional photographers. Balanced architectural and development roles to guarantee consistent product quality and high service availability across our software. During this time, I worked extensively on the design, implementation, and deployment of several products, such as a platform for theme-able portfolio websites and a system used by photographers for scheduling and collecting recurring payments associated with weddings and portrait sessions.

Owner, Creator

Atlanta, GA

DraughtCraft.com

Jun 2011 - Present

Created, deployed, and maintained an online web service used by home beer brewing enthusiasts internationally to create, browse, and share recipes for popular beer styles.
